Editorially Speaking

November 4, 1958 was a great day for the Democrats. It was also, of course, a sad day for the Republicans. In history it may turn out to be the saddest day yet for those physicians who believe in the free enterprise practice of medicine.

These days we have three parties at the national level, just as we had in 1860, the Southern Democrats, the Republicans and the Northern Democrats. In the 1850's the Democrats were so powerful and so arrogant that they thought they could do no wrong and that either branch could defeat the upstart Republicans. Abe Lincoln showed them better. He was a minority president, polling less than 40% of the popular vote; 60% was split among his three opponents who between them gained 123 electoral votes to Abe's 180. A person named John Bell polled nearly 600,000 popular votes, won 39 electoral votes and by splitting Abe's opposition three ways probably elected the pride of Illinois.

These days in late November 1958 and through '59 and '60, we will have a Congress almost evenly divided between the three major political groups. Actually in the next Congress the strongest single group will be the Northern i.e. socialistic branch of the Democratic Party. When they can combine with their non-kissing cousins of the South their total vote in both houses is just about right to override any presidential veto. If a few "liberal" Republicans join them on many questions, Ike is reduced to an impotency even worse than Mr. Hoover's in the second half of his term, who at least had enough Republicans in the Senate to protect his vetos.

Almost every member of the Democratic Party Northern Branch is beholden to Organized Labor, i.e. Mr. Reuther, and must pay off this political debt. We can expect a whole rash of bills to promote the creeping socialism of the practice of medicine and a few going all the way. The latter will not get by the opposition, but the little bills promoted for the little people of all kinds and types, including the little millionaire who spent six weeks at Camp Crowder in 1943, will pass by voice vote and if Ike dares to veto same, somewhere among the other two groups the Reuther Democrats will collect enough votes to override.

From a long term viewpoint it may be too bad that Nelson Rockefeller and Barry Goldwater upset the trend. If they had both been lost in the Democratic landslide, there would have been hope that the Reuther Democrats would have considered that they had a mandate in no unalterable terms. They would feel that socialization and civil rights must be crammed down the throats of Johnson and Rayburn and their fellows of the Southern Branch and thus bring about a split of the Democratic Party leading either to a new party in the South or an alliance with their fellow conservatives, the Republicans.

But now we know the two Democratic groups will control the Senate for not two years, but six, and the House for two, probably four and maybe six. We do not need to fear a crash program a la Harry Truman's National Health Insurance plan. But we can be sure that in the next four years, or six, the program of creeping socialism will be so strongly intrenched it cannot be reversed.

We can expect no help from Ike who has shown that his military background leads to his approval of military medicine as applied to civilians, and no matter who the Democratic President will be who will be elected in 1960, he will be cleared by the "Sidney" of that year, Walter Reuther. He will be no friend of ours.

We can only hope that perhaps the arrogance of power will lead to an organic split and that we will be saved by the folly of our enemies.

G. Wilse Robinson, Jr.

Medical Minutes

Each Medical Minute Contribution is written for all doctors rather than for any group specialty.

ANESTHESIOLOGY—
JOHN E. KYGER

In immediate post-operative period 25 mg Demerol provides as much analgesia as does 50 mg and with less respiratory depression. Sadove. JAMA, Mar. 22, '58.

CLINICAL PATHOLOGY—
JOHN E. JOHNSON

No significant relationship between ABO blood groups and female breast carcinoma found in 1000 evaluated patients. Goldenberg, et al. Cancer, Sept.-Oct., '58.

CARDIOLOGY—
LAWRENCE F. STEFFEN

Nicitinic acid in large doses probably most effective method known to lower blood lipids. Undesirable side effects preclude its use in about one-third of cases. Contra-indicated in peptic ulcer. Belle, et al. Am. J. Card., Oct., '58.

DERMATOLOGY—
FRANK X. DWYER

Excellent improvement (68%) moderate improvement (11%) and poor response (21%) in 82 South Indian patients treated for Vitiligo with Psoralens. Levai. Arch. Derm. Sept., '58.

INDUSTRIAL HEALTH—
HAROLD Y. ALLEN

Case of chronic berylium poisoning given to support view that development of hypersensitive state is essential feature in pathogenesis of disease. Jordon, et al. Thorax, Mar., '58.

NEUROSURGERY—
EDWARD C. WEIFORD

Acute leukemia in children may simulate strongly acute bacterial meningitis. Gilbert, et al. Pediatrics, May, '57.

NEUROPSYCHIATRY—
SIGMUND GUNDLE

More than 1,000 general hospitals in the United States at present accept psychiatric patients or have psychiatric sections. Joint Inform. Serv. Am. Psychiat. Assoc. Oct., '58.

OBSTETRICS AND GYNECOLOGY—
MARION W. RICHARDSON

Vesicovaginal and uterovaginal fistulas are greatest hazards of delayed complications of radical hysterectomy. Hanafee. Radiology, 70:46.

OPHTHALMOLOGY—
CALVIN J. CURTS

Of seven consecutive cases of primary tumor of orbit, six were neoplastic, only one was inflammatory. Beuerman, et al. A.J.O., Oct., '58.

ALLERGY—
HERBERT J. RINKEL

In clinical appraisal of broncho-dilator drugs, Hyadrine (Searle) received the highest mean rating in relieving obstructions of pulmonary disease. Aminophylline with Racephedrine was a close second. Schiller, et al. J of A, July, '58.

DISEASES OF THE CHEST—
WM. L. MUNDY

Note occurrence of pulmonary edema of industrial origin; diagnosis and therapy of interest. Kleinfeld, et al. Am. J. Medical Sciences, June, '58.

GASTROENTEROLOGY—
PAUL MOSS

Except for intermittent systolic contractions involving entire antralduodenal junction, the pylorus, unlike cardia, is normally relaxed, contrary to impression usually obtained clinically. Atkinson, et al. Lancet, Nov., '57.

GENERAL PRACTICE—
GERALD O'CONNELL

Approximately 5% of patients will have immediate idiosyncrasy reaction to meprobamate. Histamine liberation most likely cause. Charkes. Arch. Int. Med., Oct., '58.

ORAL SURGERY AND DENTISTRY—
DONALD W. MARTIN, D.D.S.

The lip is considered by oral and maxillofacial surgeon as one of most dangerous, if not tragic, sites for development of Ca in human body. Faillo. O.S., O.M.&O.P., June, '57.

PEDIATRICS—
SANFORD F. COCKERELL

A study of ex-premature infants in Dallas, Texas, revealed marked increased incidence of respiratory and intestinal infection over full term infants during the first two years of life. James. Pediatrics, July, '58.

PROCTOLOGY—
CLIFFORD C. EILSON

Important to recognize cancers as systemic diseases and avoid morbidity and mortality of radical operations. Overtreatment just as dangerous as undertreatment. Crile. Surg. Clin., Oct., '58.

UROLOGY—
IRA T. SMITH

Necrotizing renal papillitis should be considered as a possibility whenever sepsis or progressive renal failure is observed in diabetic patient. Whitehouse, et al. J.A.M.A., Sept. 29, '56.

In The Mail

Gentlemen:

I wish to express thanks on behalf of myself and my brother, Robert M. Schauffler, Jr., for the flowers which you sent on the occasion of our father's death.

I don't need to tell you how much the Jackson County Medical Society meant to father because he has already expressed this thought in his recent autobiography which is in your library.

Thank you for your expression of sympathy.

Sincerely,
Elizabeth Schauffler Garfield

Dear Dr. Eubank:

I enjoyed very much the lecture at the County Medical Society meeting last month. I urge that we hold more such meetings with that quality of discussion.

It was a pity that the turnout was as small as it was. That evening before the meeting I called several doctors to drive downtown with me. None would go. Therefore, I suggest that in addition to having that quality of meeting, that we hold the meetings outside the congested downtown area.

Cordially yours,
Stanley L. Goldman

Russell D. Shelden attended the annual meeting of the American Society of Anesthesiologists in Chicago, November 16 to 21, as a delegate of the Missouri Society of Anesthesiologists.

Little Known Medical History

Charles C. Dennie

Professor M. A. Barber when on the staff of the University of Kansas Medical School in 1910, devised a method of isolating individual microbes from their broth cultures. Thus, he was enabled to grow pure cultures by this method.

He drew out two glass tubes to a filiform size and fastened them to the mechanical stage of the microscope. The ends were so fine that he could insert the tube under the cover glass and draw the individual microbes up into the tube and transplant it to the culture media.

Over 30 years later another investigator reported this same procedure as original work.

Professor Barber and his wife later became Research Workers for the United States Public Health Service. Their particular work was investigation of malaria and malarial bearing mosquitos in different parts of the world. They carried on their research work in India and other Asiatic countries, Italy, Greece and Africa. Mrs. Barber, when asked about their investigation in the dark continent, replied, "It was very sketchy, we were only there for two years."

Executive Council meeting December 22, 6:30 p.m., 3036 Gillham Road.

Kansas City Tuberculin Test Survey

No drop in the tuberculosis infection rate among young school children despite a decided drop in death rate in the 10-year period covered is revealed in a communitywide study made with the aid of a Christmas Seal grant from the National Tuberculosis Association and its medical section, the American Trudeau Society.

The study, made in Kansas City, Mo., also revealed that in examining grown people in contact with kindergarten children reacting to the tuberculin skin test, active tuberculosis was found at a rate 12 times as high as is found in X-ray surveys of the general population, and that there is a relationship between the size of the reaction and the presence of active tuberculosis among the adult contacts.

During the period of the study, from 1947 to 1957, 35,995 kindergarten children were given the tuberculin test, which reveals tuberculous infection but not necessarily active disease, and the histoplasmin test for histoplasmosis, a fungus disease endemic in the area. Non-reactors, during a seven-year period, were retested in the first grade.

The study was sponsored by the Heart of America Tuberculosis Association and the U. S. Public Health Service. The results were reported in the November issue of the ATS journal, THE AMERICAN REVIEW OF TUBERCULOSIS AND PULMONARY DISEASES, in a paper by **Lawrence E. Wood** of the University of Kansas School of Medicine, Kansas City, Kansas; Michael L. Furcolow, chief, Kansas City Field Station, PHS Communicable Disease Center, and Mr. Myron J. Willis, of the Communicable Disease Center, Atlanta, Georgia.

"The youngest of school children were selected for this study because, if tuberculous infection had occurred," the authors state, "it would be relatively recent and their contacts would be limited and easier to follow. The yield of new tuberculosis cases among the children was low, as would be expected, but among the adults there

were a surprising number of new previously unknown cases of tuberculosis; the average being about 12 times that obtained by mass roentgenographic survey."

Another fact "of considerable public health interest" brought out was that the percentage of children infected with tubercle bacilli at the time of entrance in school was the same in 1957 as in 1947.

"Furthermore," the REVIEW paper states, "the percentage of children who became infected during high and showed no tendency to decline over the period of seven years' their first year in school was relatively observation. These relatively constant annual tuberculin prevalence and conversion rates should represent a reasonably accurate index of tuberculosis control within the city. There appears to be no ready explanation of the failure of these rates to fall when the death rate for Kansas City has fallen from 31.3 (per 100,000 population) to 11.7 during the 10 years of the survey."

The survey showed a higher rate of tuberculin reaction among Negro children than among the white children, but, conversely, a higher rate of histoplasmin reactors among the white children than the Negro children.

Other studies have indicated that the size of the tuberculin reaction bears a relationship to the probability of the individual's developing active tuberculosis, and the authors state that the present study indicates "a direct relationship between the size of the tuberculin reaction of young children and the likelihood of the presence of active tuberculosis among the adult contacts."

Dr. and Mrs. Richard Sutton, Jr., announce the marriage of their daughter, Serena Lee, to Richard N. Besley of North Brunswick, N. J., November 14. The marriage took place in the Wellesley Congregational Church, Wellesley, Mass.

Forty Years Ago

Leo H. Pollock

The Cause of Hay-Fever: In the regions of the United States west of the Rocky Mountains, hay-fever may be produced by an almost entirely different flora from that which causes it in the eastern states and in Europe. This emphasized the need for determining the exact species involved, in each case before treatment for immunity may be undertaken. It has been found that the type of spring hay-fever which is very troublesome in the Sacramento Valley is attributable to a walnut tree pollen (Jour. A.M.A. Aug. 10, 1918, p. 409).

Katharmon: The Council on Pharmacy and Chemistry reports that the Katharmon Chemical Company in advertising its "Katharmon" appeals especially to a profession whose members, if they live up to their ethical code, would not prescribe it. A comparison of the so-called formulas published for Katharmon in the past shows that they have not only varied from time to time but that in no instance was a quantitative statement with regard to all the asserted ingredients given. The A.M.A. Chemical Laboratory reports that Katharmon has an alkaline reaction and therefore cannot contain boric acid, salicylic acid, or "borosalicylic acid," as has been claimed. Katharmon is in conflict with Rules 1 and 4 of the Council on Pharmacy and Chemistry because of its indefinite and secrete composition and the method of advertising it indirectly to the public; it is in conflict with Rules 10, 6 and 8 in that it is an irrational shotgun mixture sold under unwarranted therapeutic claims and under a name nondescriptive of its composition. (Jour. A.M.A. Aug. 10, 1918, p. 487).

The Toxic Effects of Arsphenamin: Recent research suggests that the toxic effects sometimes obtained from the administration of arsphenamin may be caused by the use of an inefficient amount of alkali in preparing the arsphenamin solution for injection. J. Danyaz found that solutions of arsphenamin and similar preparations prepared in the usual manner, but with a small amount of calcium biphosphate added, soon precipitated on exposure to air and that these precipitates are readily soluble in sodium hydroxid. His experiments seem to show that a similar precipitation occurs when arsphenamin is injected intravenously; that this precipitation is responsible for both the mild and the severe toxic reactions; and that this precipitation is the more likely to occur the smaller the amount of alkali used for preparing the solution. He reports, however, that a hyperalkaline solution, though less toxic, when injected into the vein of rabbits than solutions containing less alkali, caused pain and that sometimes the vein became obstructed and later atrophied. Danyas also found that the toxic action of arsphenamin solutions was increased when the solutions were injected rapidly. Danyas also advised that small initial (vaccinating) doses should be given to establish tolerance before full doses are administered. (Jour. A.M.A. Aug. 17, 1918, pp. 570 and 596.)

Let the Readers Know: In the latest issue of the American Journal of Syphilis appears an article by J. Sheridan Baketel, "On the Use of American-Made Salvarsan," which is in effect a puff for Metz' Arsphenamin. The reader is informed that Dr. Baketel is Professor of Preventive Medicine and Hygiene and Lecturer on Genito-Urinary Diseases and Syphilis in the Long Island College Hospital; Genito-Urinary Surgeons to the House of Relief of the New York Hospital; Major, Medical Reserve Corps, U. S. Army. The reader is not told, however, that Dr. Baketel is or was until quite recently in the employ of A. H. Metz Laboratories (the present name of the Farbwerke Hoechst Co.) and has for some time been the manager of the pharmaceutical department of that concern. (Jour. A.M.A. Aug. 24, 1918, p. 664.)

Ordinance Regulates Narcotics

An ordinance covering the dispensing of drugs and medicine was revised by the City Council recently. It was directed at the dispensing of inhalers containing a narcotic and including them in the restricted items.

The portion of the ordinance of interest to physicians is as follows: "No pharmacist, druggist or other person shall sell, offer for sale or give away any cocaine, opium or any of its salts, alkaloids or derivatives, chloral, amphetamine, barbiturates, cannabis indica, marijuana, hasheesh, or any compound or preparation of any of them or any narcotic habit-forming drug, except upon written prescription of a duly licensed physician, veterinarian or dentist; . . ." The remainder of the section exempts domestic and proprietary remedies containing a specific limitation of narcotics.

Physicians should be mindful of the provisions of this ordinance because the pharmacists are required to observe it.

Miss Nancy Ann Kugley of Milwaukee became the bride of Clint LeMon Miller, Jr., son of **Dr. and Mrs. Clint L. Miller** of Lee's Summit, November 7 in Our Saviour's Lutheran Church in Milwaukee.

For Low Calorie or Low Fat Diets

Gail Borden Skim Milk

Gail Borden Skim Milk is HIGHEST QUALITY fresh milk, carefully pasteurized . . . with all but a trace of the butterfat removed . . . and with extra amounts of milk's natural vitamins and minerals added, together with extra non-fat milk solids. To insure an adequate supply of minerals, vitamins and proteins while on a low-calorie diet, Gail Borden Skim is the enjoyable answer!

Nutrients in Gail Borden Skim Milk

Butterfat	0.5% or less
Protein	3.9% —16% more than whole milk
Carbohydrates	5.7%
Calories	105 per half-pint: 36% less than whole milk

Vitamins and Minerals in Gail Borden Skim Milk

Vitamin A	4000	U. S. P. units per qt.
Vitamin B-1 (Thiamin)	1	Mg. per qt.
Vitamin B-2 (Riboflavin)	2	Mg. per qt.
Vitamin D	400	U. S. P. units per qt.
Niacin	10	Mgs. per qt.
Iron	10	Mgs. per qt.
Iodine	0.1	Mg. per qt.

Only Borden's has Gail Borden Skim

Your patients can have Gail Borden delivered to their door . . . or they will find it in most food stores.
